

Digital front end software solutions empower you to meet production.

COLORDYNE CONTROL SOFTWARE

Across all of our digital printing platforms, Colordyne's Control Software provides users with an intuitive user interface and the capability to easily control any and all printing applications.

COLORDYNE PRINT DRIVER AND TOOL BOX

Colordyne 1600 Series users can take advantage of the intuitive print driver that allows users to save job set up information and adjust color settings on-the-fly to save time and eliminate waste in their labeling and packaging environment. The Colordyne Tool Box provides users with the ability to manage maintenance and monitor all actions on the device.

NAVIGATOR

NAVIGATOR HARLEQUIN RIP AND WORKFLOW

Xitron's® Navigator Harlequin RIP is a best-in-class implementation of Global Graphic's Harlequin RIP. This technology is implemented across all of Colordyne's digital printing platforms. Providing prepress operators with fast, predictable, and reliable interpretation of PostScript, PDF, and EPS format files, Navigator is the most trusted name in RIP architecture with over 30,000 installations worldwide.

VARIEGATOR

VARIEGATOR

Variigator is a simple, stand-alone application that makes variable data printing quick and profitable. Variigator unlocks the power of our digital printing platforms to produce high profit variable data labels and packaging. Variigator gives you the tools to produce sophisticated data jobs with elements like variable barcodes, images and colors by dragging and dropping rather than writing complex code.

3600 Track & Report

3600 SERIES TRACK & REPORT

For 3600 Series installations, Colordyne 3600 Track & Report software is available to monitor all functions of the 3600 Series. This software provides the operator instantaneous information in regards to consumable levels and system productivity. This valuable information also provides operators with the ability to forecast and project when consumable orders will need to be placed, eliminating the need to stock inventory for just-in-case situations.

TRAINING & SUPPORT

World class service and support for your digital printing applications.

CUSTOMER TRAINING

For our 3600 Series customers, training is included as a part of the on-site installation and set-up of your digital color label and tag press system. Additional training on the press software is available as a 4-day Operator Training Course at the Colordyne corporate office for no fee. Our goal is for your team to be as knowledgeable about the product as our team.

CONTINUING EDUCATION

After installation is finished, training and education does not end. We believe in providing our customers with opportunities to enhance their knowledge about Colordyne technology through Technical Service Bulletins and additional courses offered at our corporate office and remotely.

REMOTE ACCESS SUPPORT

Colordyne uses TeamViewer™ to connect to your PC/Server to remote control as if we are sitting in the same office with you. Remote access allows us to install any necessary software or firmware to your computer, as well as provide on-demand technical support. This quick, on-the-spot solution lets us connect within seconds.

SERVICE CONTRACTS

Colordyne does not require installations to have a Service Contract. However, optional Support Contracts are available for purchase with different levels of service offered so you can choose the appropriate level for your company's needs.
